NES AI FINANCE & INSURANCE INTELLIGENCE PLATFORM

UI/UX Design Specification

Document ID: NES-UX-002 | **Version:** 1.0

Build approach: Cline-assisted development • Local-first Windows application

Scope: Personal research, paper trading and insurance document assistance

Navigation, tokens, responsive behaviour and page states

1. Experience principles

- Goal-first rather than feature-first: users start with tasks such as analyse a stock or compare policies.
- Progressive disclosure: simple view first; advanced controls are optional.
- Hybrid theme: light dashboard/insurance and optional dark trading workspace.
- Explainable outputs: source, freshness, assumptions and limitations are visible.
- Motion is purposeful and can be reduced or disabled.

2. Design tokens

Token	Light	Dark trading
Background	#F6F7F5	#0D1218
Surface	#FFFFFF	#141C25
Primary text	#17211D	#F0F4F7
Secondary text	#68736D	#A3B0BC
Border	#E1E6E1	#2A3947

Token	Light	Dark trading
Primary	#176B50	#48B68B
Accent	#D86636	#F18A58
Positive / negative	#16764B / #C43D3D	#39C58A / #F16B70

Typography and spacing

- Font: Inter. Page titles 28–32 px; section headings 20–24 px; body 14–16 px; metadata 12–13 px.
- Spacing scale: 4, 8, 12, 16, 24, 32, 40, 48 px.
- Cards: 14–18 px radius; controls 40–44 px high; use restrained shadows.
- Use tabular numerals for financial values and never rely on colour alone.

3. Navigation

Primary destination	Subpages
Home	Dashboard, tasks, notifications
Trading	Market overview, screener, watchlist, analysis, strategies, backtesting, paper trading, risk
Insurance	Overview, term life, health, vehicle, vault, comparison, claims, renewals
AI Copilot	Questions, explanations, source-linked insights
Library	Saved research, policies, reports and exports
Settings	Data sources, local AI, security, backups, accessibility

4. Page wireframes and behaviour

Home

Top: global search, data status, notifications and profile. Main: greeting and goal-first command area. Quick actions for stock analysis, screener, backtest, understand policy, compare policies and renewal review. Then demo market snapshot, watchlist, insurance summary, tasks and recent insights.

Trading

- Market overview: session status, index summaries, chart, movers, events and source timestamp.
- Screener: simple/advanced filters, search, sorting, saved screens and demo data labels.
- Stock analysis: overview, chart, fundamentals, technicals, events and AI explanation.
- Backtesting wizard: strategy → universe → period → costs/slippage → validate → results.
- Paper trading: simulated positions and orders, with a persistent no-real-orders banner.
- Portfolio/risk: exposure, concentration and explained metrics.

Insurance

- Overview: policies, renewals, missing information and recent comparisons.
- Term life, health and vehicle pages show category-specific fields where available.
- Vault: upload, process status, field review, verification, search and delete/archive.
- Compare: side-by-side coverage, exclusions, premium, restrictions, source and missing data.
- Claims: policy-linked checklist; no promise of approval. Renewals: verified dates and reminder controls.

Copilot, Library and Settings

Copilot answers should separate extracted facts, calculations, model outputs and general guidance. Library stores saved research and documents with source/date metadata. Settings control themes, reduced motion, data sources, local AI, backups, privacy and diagnostics.

5. Responsive behaviour

Viewport	Behaviour
Desktop ≥1280 px	Expanded sidebar and multi-column cards.
Tablet 768–1279 px	Collapsible sidebar, two-column cards, secondary panels as drawers.
Mobile <768 px	Drawer navigation, stacked cards, simplified chart controls and step-by-step forms.

6. Accessibility and states

- All controls have labels and keyboard focus.
- Every async component defines loading, empty, success, error and disabled states.
- Reduced-motion setting and static fallbacks are mandatory.
- Dialogs and destructive actions require clear confirmation.
- Tables remain readable and support horizontal scroll or card conversion on mobile.
