NES AI FINANCE & INSURANCE INTELLIGENCE PLATFORM

Architecture Decision Record Template

Document ID: NES-ADR-021 | **Version:** 1.0

Build approach: Cline-assisted development • Local-first Windows application

Scope: Personal research, paper trading and insurance document assistance

Record significant technical decisions and trade-offs

1. How to use this template

Create one ADR file for each significant technical decision. Keep accepted decisions immutable; supersede them with a new ADR rather than silently rewriting history.

2. Decision record

Field	Fill in
ADR ID	ADR-0001
Title	Short decision title
Status	Proposed / Accepted / Superseded / Rejected
Date	YYYY-MM-DD
Decision owner	Project owner / contributor

3. Context

Describe the problem, constraints, requirements and why the decision is needed.

4. Options considered

Option A — benefits, costs and risks.
Option B — benefits, costs and risks.
Option C — benefits, costs and risks, if applicable.

5. Decision

State the chosen option and the key reasons. Identify assumptions that must be validated.

6. Consequences

- Positive consequences.
- Trade-offs and limitations.
- Security/privacy implications.
- Migration or compatibility impact.
- Follow-up tasks and owners.

7. Review trigger

State what evidence or project change would cause this decision to be reconsidered.
